*ZEGAZ Instruments WDP5000™ water dewpoint analyzer is the most advanced water dewpoint measurement system available. While most water analyzers measure water content and then calculate dewpoint, WDP5000™ measures the actual dewpoint at the supplied pressure.*

ZEGAZ Instruments products are the only analyzers in the world that use CEIRS™, a spectroscopic approach that determines the dewpoint, while unambiguously determining whether it was water or hydrocarbon dewpoint.

The CEIRS™ method uses advanced IR technology. It is immune to contaminations. It is designed for remote operation at line pressure up to 2000psi. It provides 4 analog outputs as well as 3 digital alarms, and serial communications.

CEIRS™ technology has unprecedented accuracy and repeatability. It has been tested at NIST. The dewpoint temperature measurements are NIST traceable.
